Excluded Shoreline "A"

The frontage along these properties is excluded from shore out to 150 feet in the water. The exclusion does not extend to the shoreline vegetation – the wetland vegetation both above and below the ordinary high water mark is still included as within sensitive area #1. This frontage is now excluded because the plant community is nearly 100% Eurasian water milfoil or is simply devoid of any aquatic plant vegetation. This frontage exhibits a water depth of 0 inches to 4 inches. The sediment depth is a minimum of 2 feet at this location. This exclusion area is a change from the original sensitive area survey which was conducted in 1989.
